417 the house from the glances of the curious. It has been suggested that the stationary gate at the entrance of the courtyard is of Chinese [177] origin, that its purpose originally was to scare away spirits, and that its former presence in the tomb compound indicates that it was intro- [169] duced along with the turtleback or horseshoe tomb from Fukien province in China.[2]

175 Captain Hall described Okinawan house exteriors and the surrounding 351 buildings, including those of the common people. The house was "buried 342 in foliage" and hidden from view. It was surrounded by a light fence of rods, about one foot apart with creepers on top. These rods were probably stalks of miscanthus grass, or of the dwarf bamboo. The site had a wicker gate, possibly meaning the hinpun made out of the dried grass stalks. One house which he described was divided into two compartments, eight feet square, with a small veranda at one end. The floors, made of bamboo, and about six feet above the ground, were covered with a straw mat. The walls, about five feet high, were wattled with split bamboo, and the house had a pointed thatched roof.

[352] In the interior, there were shelves for bowls and cups, and in a [354] loft or garret tools, nets, or baskets were stored. These installations now are often found in the kitchen. In the middle of one side of the house there was a fireplace, sunk below the level of the ground.

[343] Outside, in the compound, a pigeon house, poultry yard and spinning 175 wheels were observed. In another passage, Hall describes a cottage of 342 "wattled rattans" with a light open bamboo roof with thatch and creepers, one wing of which was occupied by goats. The compound consisted of a stable, a pig sty, and a poultry house. There was also a mill. The granary was on posts about six feet above the ground with firewood [325] piled below. There was an anvil with a forge of masonry but no bellows.[3]

The houses of the poor, said Fahs in his report to Commodore Perry, were made of bamboo and had no floors.[4] Accounts around the turn of the century say that houses and granaries were supported by corner posts of considerable height. Schwartz said these posts were about five feet high. The house walls of straw thatch were held in place by bamboo grass matting with a space two feet in width acting both as a door and a window, a matting curtain covering the aperture.[5]

2 Simon, as cited, 80. C. W. Bishop has suggested that the stone houses of the Ainus of Hokkaido point to contact with southern insular peoples. Also, the primitive Japanese hut which was illustrated resembled the one we have been describing for Okinawa. It had a thatched roof and a courtyard which was cut off from the outside view by the hinpun. The historical geography of early Japan. Geo. Review, 13 (1923), 40-63. Note especially Figures 5 and 6.
